Pressure switches

Axxa can not only supply these products at a fantastic price but we can also offer a precise setting service using our in house calibration equipment. The railway sector greatly benefits from this as we have already dealt with many companies within this industry!

Variable Frequency Drives

Lifting, crushing, cooling, pumping, mixing. Nowadays that motor should probably be controlled by a Variable Frequency Drive (ask us about upgrading from direct on line). As part of our superior product offering, we chose to distribute Control Techniques. Designed and manufactured in the UK, providing an industry beating 5 Year Warranty, Control Techniques have been the industry leader in motor control since 1973. Control Techniques aligns perfectly with the Axxa brand ethos; recognised for ease of system build, commissioning, and maintenance.
